WORK EXPERIENCE

Frontend Tech Lead
Lean Solutions Group

02/2021 - Present   *Remote at Colombia*
A nearshore service provider that delivers high-quality business solutions in staffing, tech, marketing, and sales for U.S.-based companies.

Achievements/Tasks

- Successfully delivered a delayed project; by optimizing every detail of the development workflow and accumulating a streak of correct decisions, which led to regaining our client's trust and expectations of the company.

- Re-architected an existing web application that facilitates interactions between shippers, carriers, and brokers called Efficiency. I used advance React patterns, static analysis, and unit/integration testing; to successfully create a scalable-simple codebase. It paid off since we saw an improvement of 75% (for developers of any seniority) less time in adding new features and fixing bugs.

- Mentor less-experienced developers, by promoting safe environments for asking questions, learning, and sharing knowledge.

Frontend Developer
FitHub

09/2020 - 12/2020   *Remote at Colombia*
A retailer whose purpose is to help their users adopt good life habits.

Achievements/Tasks

- Developed our new e-commerce using ReactJS, TailwindCSS, Apollo, and Redux. It resulted in us having a 50% faster website, with the ability to easily pivot as we grow.

Frontend Developer
Fluid Attacks

05/2020 - 08/2020   *Remote at Colombia*
A pen-testing and ethical hacking company that identifies and reports all your applications and software vulnerabilities ASAP.

Achievements/Tasks

- Migrated the entire frontend codebase from TSLint to ESLint using the strictest configuration, which improved the consistency of our codebase and the prevention of 30% more bugs.

PERSONAL PROJECTS

React Movie DataBase (07/2020 - 08/2020)
- Created an open-source project that consumes data from the MovieDB API to show you trending movies and details about them. On the other hand, this project is the one I use to try everything I'm learning.

Webpack Config (09/2020 - 01/2021)
- Created a base configuration for every project that needs to use plain Webpack and an opinionated Webpack configuration for my React projects.
